NASI GROUP

ABOUT SECTION — DEVELOPER-GRADE IMPLEMENTATION SPECIFICATION

A deterministic build document for the existing NASI Group website. This is an implementation contract, not a creative moodboard. A developer or coding agent should be able to build the section without guessing layout, copy, animation behavior, breakpoints, component boundaries, or acceptance criteria.

Current site: https://nasi-group.vercel.app

Scope: Replace/rebuild only the homepage About section. Do not redesign the rest of the website.

Brand: NASI GROUP · BUILDING LEGACY

Primary visual language: dark architectural editorial, warm off-white typography, NASI gold accent, restrained motion, realistic photography.

Core narrative: PEOPLE → IDEAS → EXECUTION → LEGACY

01. SCOPE LOCK — DO NOT EXPAND

The implementation must modify only the About section on the existing homepage.

- DO NOT redesign the header or navigation.
- DO NOT change the existing 3D hero concept, hero copy, hero buttons, or hero animation.
- DO NOT change the Services, Projects, Insights, Contact, or Footer sections.
- DO NOT change global typography, global color tokens, routing, CTA destinations, or existing page behavior.
- DO NOT create a separate About route. The new About experience remains an in-page homepage section.
- DO NOT assign Real Estate, Construction, or Interiors to individual founders. Those are NASI Group business verticals, not founder identities.
- DO NOT use generic AI-generated corporate imagery, floating holograms, excessive particles, glowing 3D text, or stock-photo collage layouts.

Definition of done

When the work is complete, the homepage outside the About section must behave exactly as before. Only the visual/content/interaction area occupied by the About section is changed.

02. WHAT THIS SECTION MUST COMMUNICATE

The section must answer four questions in this exact order:

- Why does NASI Group exist?
- Who are the people behind it?
- What principles guide how they work?
- What does NASI Group want to build over the long term?

The section must feel like a premium architecture/design company profile rather than a conventional 'About Us' template.

03. FINAL SECTION ORDER

Order	Component	Purpose
A	About Intro	Establish NASI's philosophy and visual identity.
B	Architectural Detail	Create a short visual transition into the founders.
C	Founders	Introduce the three founders as complementary individuals.
D	Shared Direction	Show that different backgrounds converge on one NASI direction.
E	Four Principles	Explain how NASI approaches its work.
F	Purpose / Legacy	Close the story with the company's long-term intent.
G	Section Exit	Return naturally to the existing next homepage section.

04. COMPONENT A — ABOUT INTRO

```
Section ID: #about
Component:
Desktop height target: 720px
Tablet height target: 620px
Mobile height target: auto; minimum 620px
```

Exact copy

Eyebrow: ABOUT NASI GROUP

Headline: PEOPLE. IDEAS. EXECUTION. LEGACY.

Body: NASI Group brings together real estate, construction and interiors with a practical focus on creating well-designed spaces, delivering them with discipline, and building long-term value.

Secondary line: Different experiences. One shared direction.

Desktop layout

- Full-width section with the existing site background color.
- Content container: max-width 1280px; horizontal padding 80px at 1440px.
- Use a 12-column CSS grid with 24px column gap.
- Eyebrow begins at column 1.
- Headline occupies columns 1–8.
- Body copy occupies columns 8–12 and is vertically aligned around the lower half of the headline.
- Add one thin 1px NASI-gold rule from column 1 to column 4 below the copy.
- Do not center the whole section. Keep the composition left-led and editorial.

Mobile layout

- Use one column.
- Horizontal padding: 20px on screens ≤ 767px.
- Eyebrow, headline, body and rule stack vertically.
- Headline font size target: 42px; line-height 0.98–1.05.
- Body max-width: 330px.
- Do not use horizontal overflow.

05. COMPONENT B — ARCHITECTURAL DETAIL TRANSITION

```
Section ID: #about-detail
Component:
Desktop height: 360px
Mobile height: 260px
```

This is a visual bridge, not a separate marketing section.

Implementation

- Use a single real architectural photograph supplied by the project team. Do not generate a synthetic AI image.
- Image treatment: monochrome/low-saturation with a dark overlay so it visually belongs to the existing site.
- Place a thin gold architectural line overlay using CSS/SVG: one horizontal datum line, one vertical line, and two small dimension ticks.
- The overlay is decorative and must not look like a technical CAD drawing.
- On scroll, image opacity transitions from 0.55 to 0.85 while the line overlay moves upward by 18px.
- Animation duration: 0.7s, ease: power2.out, triggered once when the component enters 75% viewport.

06. COMPONENT C — FOUNDERS

```
Section ID: #about-founders
Component:
Desktop minimum height: 920px
Tablet minimum height: 820px
Mobile height: auto
```

Section heading

Eyebrow: THE PEOPLE BEHIND NASI

Headline: THREE PERSPECTIVES. ONE DIRECTION.

Supporting line: NASI Group is shaped by different experiences, disciplines and ways of thinking — brought together around one shared standard for how the company builds and grows.

Founder data — use exactly this order

#	Name	Designation	Background / approved bio direction
01	SRI HARSHA B S	FOUNDER & MANAGING DIRECTOR	Computer Science Engineering; network engineering; real estate, cons
02	MOHIT SRINIVASAN	CO-FOUNDER & MANAGING DIRECTOR	Computer Science Engineering; DevOps consulting; real-estate market
03	VARUN NARAYAN	CO-FOUNDER & MANAGING DIRECTOR	Civil Engineering; construction, interiors and plotted-layout developme

Founder card structure

- Each card has exactly four visible text elements: number, portrait, name/designation, short biography.
- Do not add service labels such as 'Real Estate Lead', 'Construction Lead', or 'Interiors Lead'.
- Use a 3-column grid on desktop, 2-column grid on tablet, 1-column grid on mobile.
- Desktop card gap: 24px. Tablet gap: 18px. Mobile gap: 28px.
- Portrait aspect ratio: 4:5. Use object-fit: cover.
- Keep portraits realistic and minimally retouched. No AI face generation or face modification.
- Use thin borders and typography to create hierarchy; do not put each founder inside a heavy rounded card.

Founder card animation

- Initial state: image opacity 0, translateY(28px).
- On entering viewport: image opacity 1 and translateY 0.
- Stagger: 120ms between cards.
- Duration: 650ms.
- Easing: power3.out.
- Name/designation fades in 120ms after image animation starts.
- Hover on desktop: image scale 1.025 over 450ms; no tilt, no cursor-following effect.
- Hover must not change card height or page layout.

07. COMPONENT D — SHARED DIRECTION

```
Section ID: #about-direction
Component:
Desktop height: 520px
Mobile height: 420px
```

Primary statement: DIFFERENT EXPERIENCES. ONE SHARED DIRECTION.

Body: NASI Group combines technology, development, construction, interiors, marketing and business strategy under one operating mindset: plan carefully, execute responsibly and create value that lasts.

Layout

- Desktop: left 55% text / right 45% architectural wireframe.
- Mobile: text first, wireframe below.
- Wireframe must be a lightweight SVG, not a WebGL scene.
- Use a simplified building elevation composed of 12–20 lines maximum.
- Gold stroke width: 1px desktop; 0.75px mobile.

- Animation: SVG paths draw from 0% to 100% over 1.4s once when 70% of the component enters the viewport.
- After draw completion, a small gold point travels along one horizontal line for 1.2s and then stops.

08. COMPONENT E — FOUR PRINCIPLES

```
Section ID: #about-principles
Component:
Desktop height: 620px
Mobile height: auto
```

No.	Title	Exact supporting copy
01	VISION	Think beyond the immediate project and design for where the space, business and community are headin
02	VALUES	Build trust through transparency, responsibility, quality and respect for the people involved.
03	APPROACH	Plan clearly, communicate directly and execute with attention to detail.
04	IMPACT	Measure success by the usefulness, durability and long-term value created.

Layout and interaction

- Desktop: 4 equal columns with 1px vertical separators.
- Tablet: 2 × 2 grid.
- Mobile: 1 column with 1px horizontal separators.
- Each item has a large index number, title, and supporting copy.
- On hover, title moves upward by 4px and gold rule extends from 24px to 48px.
- Transition duration: 300ms.
- No cards, shadows, glassmorphism or gradients.

09. COMPONENT F — PURPOSE / LEGACY

```
Section ID: #about-purpose
Component:
Desktop height: 720px
Mobile height: 620px
```

Exact copy

Eyebrow: BUILDING LEGACY

Headline: BETTER SPACES. BRIGHTER TOMORROWS.

Body: We are building NASI Group as a long-term enterprise — one that brings together people, property, construction and design to create places and projects that remain valuable beyond the day they are completed.

Layout

- Desktop: split 50/50 layout.
- Left: warm off-white background with dark text and generous padding.
- Right: one real architectural/interior photograph, full-bleed within the component.
- The image must show a completed, believable space; avoid futuristic CGI.
- Image has no text baked into it.
- Mobile: image first, text second OR text first, image second; choose one and keep it consistent. Required implementation: image first, text second.
- Desktop text padding: 80px. Mobile text padding: 40px 20px.
- Headline max-width: 520px desktop; 340px mobile.

Animation

- Image uses clip-path inset(0 100% 0 0) → inset(0 0 0 0), duration 900ms, ease power3.inOut.
- Text begins at translateY(24px), opacity 0 and resolves to translateY(0), opacity 1 over 650ms.
- Text animation starts 180ms after image reveal.
- Trigger once at 70% viewport.

10. COMPONENT G — SECTION EXIT

```
Section ID: #about-exit
Height: 180px desktop / 120px mobile
```

Do not add a new CTA button. The About section should end with breathing room and allow the existing next homepage section to enter naturally.

- Use the existing site background.
- At bottom center, place a small gold 1px line, 48px wide.
- No additional headline, button, logo, or navigation.
- Do not pin the section or create a scroll trap.

11. MASTER ANIMATION SYSTEM

Do not create separate scroll systems for every child. Use one section-level progress value and local triggers only where a one-time reveal is required.

```
const ABOUT_CONFIG = {
once: true,
rootMargin: "0px 0px -25% 0px",
reducedMotion: "respect prefers-reduced-motion",
easing: "power3.out"
};
```

Required behavior

- Use GSAP + ScrollTrigger if GSAP is already installed in the project. If GSAP is not installed, use the project's existing animation system rather than adding a second animation framework.
- Every animation must be deterministic and finite.
- No infinite loops except an optional 2-second opacity breathing effect on the architectural line, and only if performance remains stable.
- Animations must not modify layout dimensions.
- Do not animate font-size, width, height, or expensive filters on scroll.
- Respect prefers-reduced-motion: disable transforms, clip-path animation and stagger; render final states immediately.

12. TYPOGRAPHY & VISUAL TOKENS

Reuse the site's existing font stack wherever possible. Do not introduce a new display font solely for this section.

Token	Value / rule
Background dark	#0B0B0A or existing site dark token; use existing project token if defined.
Warm white	#F3F0E8 or existing site warm-white token.
NASI gold	#C8A96B; use existing NASI gold token if already defined.
Deep maroon accent	#4A1F24; optional only where the existing site already uses it.
Hairline	1px solid with gold/white at low opacity.

Token	Value / rule
Body width	330–620px depending on component.
Border radius	Use existing site radius. Do not introduce oversized rounded cards.

13. RESPONSIVE BREAKPOINT CONTRACT

Viewport	Grid	Horizontal padding	Founder layout	Notes
≥ 1280px	12 cols / 24px gap	80px	3 cols	Primary desktop composition.
1024–1279px	12 cols / 20px gap	64px	3 cols	Reduce type/spacing by ~10%.
768–1023px	8 cols / 20px gap	32px	2 cols	No horizontal overflow.
≤ 767px	4 cols / 12px gap	20px	1 col	Stack all editorial compositions.

Use CSS media queries. Do not use JavaScript to calculate responsive layout.

14. REQUIRED ASSET PACKAGE

Asset	Required format	Minimum target	Usage
Founder portraits ×3	WebP/AVIF/JPG	1600×2000px	4:5 portraits; one per founder.
Architectural transition image	WebP/AVIF	2400×1350px	About architectural detail.
Legacy/interior image	WebP/AVIF	2400×1600px	Purpose split panel.
Shared-direction SVG	SVG	Vector	Simple building wireframe.

- All raster images must have explicit width/height or aspect-ratio to prevent layout shift.
- Use lazy loading for images below the initial viewport.
- Use priority loading only for the first visible About image if it appears above the fold after the existing hero.
- Do not embed images as base64.
- Do not use AI-generated faces or altered founder identities.

15. RECOMMENDED COMPONENT STRUCTURE

```
components/
about/
AboutSection.tsx
AboutIntro.tsx
AboutArchitecturalDetail.tsx
FounderGrid.tsx
FounderCard.tsx
SharedDirection.tsx
PrinciplesGrid.tsx
LegacyStatement.tsx
about.data.ts
about.motion.ts
about.css // only if project architecture requires local CSS

data:
founders
principles
copy
image paths
```

If the existing repository uses a different component structure, preserve its conventions. The logical separation above is required even if filenames differ.

16. DATA MODEL

```
type Founder = {
id: string;
index: string;
name: string;
designation: string;
bio: string;
image: string;
alt: string;
};

type Principle = {
index: string;
title: string;
body: string;
};
```

Founder content should be stored as data, not duplicated directly across JSX markup.

17. ACCESSIBILITY

- Founder portraits require meaningful alt text: e.g. 'Sri Harsha B S, Founder and Managing Director of NASI Group'.
- Decorative architectural images must use empty alt text.
- The section must remain fully readable at 200% browser zoom.
- Do not encode essential text inside images.
- All interactive elements must have visible focus states.
- Hover effects must have equivalent non-hover presentation.
- Reduced-motion users receive the final visual state without movement.

18. PERFORMANCE CONTRACT

- No new WebGL scene for the About section.
- No canvas particle system.
- No video background.
- Prefer SVG/CSS for line animation.
- Use responsive image sources.
- Avoid scroll event listeners when ScrollTrigger/intersection observers already exist.
- Do not create React state updates on every animation frame.
- Target smooth scrolling at 60fps on modern desktop and stable behavior on mid-range mobile devices.
- If an animation causes frame drops on mobile, remove the animation rather than reducing image quality below acceptable visual standards.

19. COMPONENT STATE / INTERACTION TABLE

Component	Initial	Enter	Hover	Exit
AboutIntro	Visible or lightly offset	Headline/copy fade-up 650ms	None	No exit animation
ArchitecturalDetail	Opacity .55	Opacity .85 + line translate 18px	None	No exit
FounderCard	Image opacity 0 / Y28	650ms + 120ms stagger	Scale 1.025 / 450ms	No exit
SharedDirection	SVG stroke hidden	Draw 1.4s	None	No exit
Principle	Static	Fade/translate 500ms stagger	Title Y-4px + rule	No exit

Component	Initial	Enter	Hover	Exit
LegacyStatement	Image clipped	Clip reveal 900ms; text +180ms	None	No exit

20. COPY RULES

- Do not add marketing claims that were not provided.
- Do not invent awards, years of experience, transaction values, project counts, certifications, or client logos.
- Do not describe NASI as 'India's leading', 'best', 'number one', or similar unsupported positioning.
- Keep founder bios factual and short.
- Use sentence case for body copy and uppercase only for labels/headlines where specified.
- Do not use filler phrases such as 'revolutionizing the industry', 'where innovation meets excellence', or 'shaping the future of tomorrow'.

21. VISUAL NO-GO LIST

- No glassmorphism.
- No floating gold 3D letters.
- No neon glow.
- No excessive lens flare.
- No fake holographic UI.
- No random floating particles.
- No generic corporate handshake imagery.
- No AI-looking architectural renders when a real photograph can be used.
- No excessive rounded cards.
- No carousel for founder profiles.
- No autoplay video.
- No cursor-following 3D distortion.

22. QA / ACCEPTANCE CRITERIA

Test	Pass condition
Existing homepage	All sections outside About are unchanged.
Desktop 1440px	Layout matches specified 12-column structure and no horizontal overflow.
Laptop 1280px	No overlap; typography remains readable; founder grid stays 3 columns.
Tablet 768–1023px	Founder grid becomes 2 columns; split sections adapt cleanly.
Mobile 390px	Single-column layout; no clipping; all copy readable; no horizontal scroll.
Reduced motion	Animations are disabled and final visual states render immediately.
Keyboard	No focus trap; any interactive element has visible focus.
Performance	No persistent animation loop; no new WebGL/canvas workload.
Images	No layout shift caused by missing dimensions/aspect ratios.
Copy	All exact copy in this specification is used unless an approved content revision is supplied.

23. DEVELOPER HANDOFF CHECKLIST

- 1. Inspect the existing repository and identify the current homepage About section/component.
- 2. Preserve all existing global styles and site-wide components.
- 3. Replace only the About section with the specified component hierarchy.
- 4. Add the supplied founder and architectural assets using the specified aspect ratios.
- 5. Implement responsive layouts using CSS breakpoints.
- 6. Implement the specified finite animations using the project's existing animation stack or GSAP if already present.
- 7. Add reduced-motion handling.
- 8. Run desktop, tablet and mobile QA at the exact viewport ranges in Section 13.
- 9. Verify there is no horizontal overflow and no layout shift.
- 10. Verify the rest of the homepage has no visual or functional regression.
- 11. Remove all placeholder copy and placeholder images before delivery.
- 12. Deliver production-ready code, not a mockup.

24. FINAL DEFINITION OF DONE

The About section is complete only when it can be reviewed against this document line-by-line. A developer should not need to ask what the layout is, what text to use, what each founder represents, how the animation behaves, what happens on mobile, or what should remain untouched. Any item not explicitly changed by this specification must remain as it exists on the current NASI Group website.

Core message to preserve: The founders are three individuals with different experiences and complementary perspectives. Real Estate, Construction and Interiors are NASI Group business verticals — they are not founder labels.

Brand close: BUILDING LEGACY
