NASI GROUP

BUILDING LEGACY.

REAL ESTATE · CONSTRUCTION · INTERIORS

MASTER CREATIVE & DEVELOPMENT SPECIFICATION

NASI GROUP

2026 WEBSITE DESIGN & DEVELOPMENT — COMPLETE CREATIVE DIRECTION

Brand Tagline

BUILDING LEGACY.

01. THE PURPOSE OF THE WEBSITE

The NASI Group website should not look like a conventional real estate website.

NASI Group is a multidisciplinary company built around three connected capabilities:

REAL ESTATE

Finding the right property and opportunity.

CONSTRUCTION

Planning and building with precision.

INTERIORS

Creating spaces that feel personal and purposeful.

The website should communicate the complete NASI ecosystem:

OPPORTUNITY → PROPERTY → CONSTRUCTION → INTERIORS → EXPERIENCE → LONG-TERM VALUE

The objective is for a visitor to understand within the first few minutes that:

NASI is more than a property consultant. NASI understands the complete built environment.

The website should feel like a combination of:

Premium Property Advisory + Architecture Studio + Construction Company + Interior Design Studio + Digital Experience Platform

02. THE OVERALL FEEL

The website should be:

* Premium
* Minimal
* Architectural
* Contemporary
* Sophisticated
* Human
* Trustworthy
* Technology-driven
* Editorial
* Visually immersive

It should not be:

* Corporate-heavy
* Template-based
* Overly flashy

* Filled with generic cards
* Stock-photo driven
* AI-looking
* Full of unnecessary animations
* Similar to Magicbricks, 99acres or other property portals

Core principle:

DON’T MAKE THE WEBSITE LOOK EXPENSIVE.

MAKE THE EXPERIENCE FEEL VALUABLE.

03. FIRST IMPRESSION — HERO EXPERIENCE

Do not start with:

Welcome to NASI Group.

Do not immediately show six service cards.

Do not use a generic real-estate stock video.

Instead, create an immersive opening experience.

HERO HEADLINE

WE BUILD WHAT COMES NEXT.

Supporting copy:

Real estate. Construction. Interiors. One integrated approach to creating spaces with lasting value.

Buttons:

EXPLORE NASI

VIEW PROPERTIES

HERO VISUAL CONCEPT

The visitor initially sees a minimal dark architectural environment.

A visual representation of land slowly develops.

As the visitor scrolls:

LAND

↓

STRUCTURE

↓

SPACE

↓

EXPERIENCE

This represents:

REAL ESTATE → CONSTRUCTION → INTERIORS

The transformation should feel cinematic and sophisticated.

It should not look like a technology demonstration.

04. THREE ENTRY PATHWAYS

Immediately within or following the hero, introduce three pathways.

REAL ESTATE

Find the right opportunity.

CONSTRUCTION

Build with confidence.

INTERIORS

Make the space yours.

These should be interactive.

On desktop:

* Cursor interaction
* Image movement
* Subtle 3D response
* Hover transitions

On mobile:

* Swipeable sections
* Lightweight animation
* Large imagery

05. NAVIGATION

Keep navigation extremely clean.

MAIN NAVIGATION

NASI GROUP

* About
* Real Estate
* Construction
* Interiors
* Projects
* Insights
* Contact

RIGHT-SIDE CTA

START A CONVERSATION

The navigation should initially sit transparently over the hero.

When the user scrolls, it should transform into a compact floating navigation bar.

Avoid a large traditional corporate navbar.

06. HOMEPAGE STORY

The homepage should feel like a visual story, not a collection of website sections.

Recommended sequence:

01

HERO

WE BUILD WHAT COMES NEXT.

↓

02

NASI ECOSYSTEM

ONE VISION. THREE DISCIPLINES.

↓

03

REAL ESTATE

PROPERTY, WITH PERSPECTIVE.

↓

04

THE NASI DIFFERENCE

Why NASI?

↓

05

CONSTRUCTION

BUILT WITH INTENTION.

↓

06

INTERIORS

SPACES THAT FEEL LIKE YOU.

↓

07

FEATURED PROJECT

An immersive NASI project story.

↓

08

NASI INSIGHTS

Knowledge, market perspectives and project stories.

↓

09

ABOUT NASI

BUILT AROUND A SIMPLE IDEA.

↓

10

FINAL CTA

LET’S BUILD SOMETHING WORTH TALKING ABOUT.

07. NASI ECOSYSTEM

ONE VISION. THREE DISCIPLINES.

Copy:

NASI Group brings real estate, construction and interiors together under one ecosystem — allowing every decision to be considered as part of the bigger picture.

Instead of three ordinary cards, create a connected visual system:

LAND

↓

BUILD

↓

DESIGN

↓

EXPERIENCE

Each stage should reveal more information as the user interacts.

08. REAL ESTATE — PRIMARY BUSINESS EXPERIENCE

Real estate should receive the strongest presence on the website.

Headline:

PROPERTY, WITH PERSPECTIVE.

Supporting copy:

Discover properties selected not simply for what they are today, but for what they can become tomorrow.

The property experience should feel like:

Private Property Advisory + Architectural Magazine + Digital Property Gallery

—not a property portal.

09. BENGALURU PROPERTY LISTING

For the current website, the property listing should focus on:

BENGALURU PROPERTIES

There should be no Dubai property listing section in the website structure.

Main categories:

* Residential
* Commercial
* Plots & Land
* Villas
* Investment Opportunities

The CMS should allow additional categories later.

10. PROPERTY DISCOVERY

Visitors should be able to discover properties through:

* Location
* Property type
* Budget
* Area
* Configuration
* Status
* Purpose
* Other relevant property-specific filters

The interface should be visually driven.

Large imagery.

Minimal text.

Strong typography.

Simple filtering.

11. PROPERTY CARDS

Do not display every specification on the first screen.

Show:

PROPERTY NAME

Short positioning statement

LOCATION

PROPERTY TYPE

PRICE

STATUS

Then:

EXPLORE PROPERTY →

When the user hovers over a property:

* Image subtly changes
* Location appears
* Key statistics animate
* CTA appears
* Image movement creates depth

The card should feel alive, but not gimmicky.

12. PROPERTY DETAIL PAGE

Every important property should have an individual page.

The page should begin with a large visual experience.

Example headline:

A HOME THAT FEELS LIKE A DESTINATION.

or:

AN OPPORTUNITY IN THE RIGHT LOCATION.

Then display:

LOCATION

PROPERTY TYPE

AREA

PRICE

STATUS

The page should tell a story before presenting a large specification table.

13. PROPERTY STORYTELLING

Every important property should answer five questions.

01 — WHY THIS PROPERTY?

What makes this property interesting?

02 — WHY THIS LOCATION?

Explain:

* Connectivity
* Roads
* Metro
* Schools
* Hospitals
* Commercial hubs
* Surrounding developments
* Neighbourhood
* Future infrastructure where verified

03 — WHAT DOES THE SPACE FEEL LIKE?

Communicate:

* Architecture
* Natural light
* Space
* Views
* Materials
* Planning
* Landscape
* Lifestyle

04 — WHY DOES IT MAKE SENSE?

Where applicable:

* Price
* Usability
* Location advantages
* Ownership considerations
* Development potential
* Investment perspective

05 — WHAT IS THE NEXT STEP?

REQUEST DETAILS

SCHEDULE A VISIT

SPEAK TO AN ADVISOR

14. PROPERTY INTELLIGENCE

For selected properties, introduce:

PROPERTY INTELLIGENCE

Possible information:

LOCATION

Connectivity

NEIGHBOURHOOD

Development context

PROPERTY

Specifications

ACCESS

Major connectivity

OWNERSHIP

Relevant verified information

MARKET PERSPECTIVE

Relevant market information

Any investment-related information must be based on verified data.

Never present projected appreciation or returns as guaranteed.

15. INTERACTIVE LOCATION EXPERIENCE

Do not simply place a Google Maps iframe at the bottom.

Create a designed location experience:

THE LOCATION

The user should be able to explore:

CITY → LOCATION → PROPERTY

Show relevant:

* Major roads
* Metro stations
* Airports
* Schools
* Hospitals
* IT/business hubs
* Shopping
* Lifestyle destinations
* Upcoming infrastructure

Only verified information should be displayed.

16. 3D PROPERTY EXPERIENCE

Where suitable assets exist:

EXPLORE IN 3D

Users can potentially:

* Rotate the property
* Explore exterior
* Navigate floors
* View floor plans
* Explore amenities

* Enter virtual spaces
* Switch views
* Explore interior finishes

3D should only be used when it genuinely improves property understanding.

It should load progressively.

17. “WHAT IT FEELS LIKE”

Create a unique section:

WHAT IT FEELS LIKE

Instead of specifications, show:

MORNING LIGHT

PRIVACY

SPACE

VIEWS

MATERIALS

LANDSCAPE

LIFESTYLE

This is an important part of making NASI feel different from traditional property websites.

18. CONSTRUCTION

Construction should be positioned as a core capability, not just another service.

Headline:

BUILT WITH INTENTION.

Supporting copy:

From foundation to finishing, we approach construction as a process of precision, accountability and long-term performance.

19. CONSTRUCTION JOURNEY

Create a scroll-driven experience.

DISCOVER

Understand the client’s requirements.

↓

PLAN

Budget, drawings, timelines and execution strategy.

↓

DESIGN

Architecture, engineering and functionality.

↓

BUILD

Execution and coordination.

↓

INSPECT

Quality, workmanship and milestones.

↓

DELIVER

Completion and handover.

↓

SUPPORT

Post-completion assistance where applicable.

20. CONSTRUCTION VISUAL TRANSFORMATION

As the user scrolls, the visual should progress:

SITE

↓

FOUNDATION

↓

STRUCTURE

↓

WALLS

↓

SERVICES

↓

FINISHING

↓

COMPLETED SPACE

This can become one of the signature NASI website interactions.

21. THE NASI CONSTRUCTION DIFFERENCE

Headline:

WE DON’T JUST BUILD.

WE MANAGE THE DETAILS.

Focus on:

* Transparent communication
* Structured planning
* Quality-conscious execution
* Material clarity
* Site supervision
* Timeline management
* Vendor coordination
* Design coordination
* Documentation
* Client involvement

Avoid unsupported statements such as:

“Best quality.”

“Number one.”

“World-class.”

“Unmatched excellence.”

The website should demonstrate capability rather than simply claim it.

22. CONSTRUCTION PROJECT PAGES

Each major construction project should have:

* Project Overview
* Client Brief
* Site Conditions
* Design Approach
* Planning
* Construction Journey
* Materials
* Challenges
* Solutions
* Progress
* Final Outcome

Timeline:

BRIEF → DESIGN → PLANNING → EXECUTION → FINISHING → HANDOVER

Use actual project photography wherever possible.

23. PROJECT PULSE

For selected active construction projects:

PROJECT PULSE

Example:

OVERALL PROGRESS — 68%

Foundation — 100%

Structure — 80%

Electrical — 60%

Plumbing — 60%

Interiors — 30%

This can eventually connect with NASI's internal project-management system.

24. INTERIORS

Construction should feel:

PRECISION

Interiors should feel:

EMOTION

Headline:

SPACES THAT FEEL LIKE YOU.

Supporting copy:

Interior design isn't about filling a room. It's about creating an environment that belongs to the people who live, work and experience it.

25. INTERIOR CATEGORIES

* Residential
* Luxury Residential
* Office
* Retail
* Hospitality
* Custom Spaces

The gallery should feel like an editorial architecture publication.

Use:

* Full-screen photography
* Horizontal galleries
* Material close-ups
* Before/After
* Floor plans
* Moodboards
* 3D renders

* Completed photography

26. SIGNATURE INTERIOR FEATURE

BEFORE → AFTER

Interactive slider:

BEFORE

← DRAG →

AFTER

Use actual NASI projects wherever possible.

This demonstrates NASI's capability without needing exaggerated marketing copy.

27. MATERIAL EXPERIENCE

Headline:

THE DETAILS MATTER.

Create an interactive material collection:

STONE

WOOD

METAL

GLASS

FABRIC

LIGHTING

TEXTURES

Clicking each material should open:

* Close-up photography
* Application
* Design reasoning
* Project examples

28. INTERIOR PROCESS

UNDERSTAND

Lifestyle, requirements and personality.

CONCEPT

Mood, colour, materials and spatial direction.

DESIGN

Layouts, furniture, lighting and details.

DEVELOP

Drawings, specifications and execution planning.

EXECUTE

On-site coordination and installation.

REVEAL

The completed environment.

The final stage should transition naturally into completed project photography.

29. PROJECTS

Create a central:

PROJECTS

This becomes NASI’s visual portfolio.

Filters:

ALL

REAL ESTATE

CONSTRUCTION

INTERIORS

COMPLETED

ONGOING

FEATURED

Each project should have its own detailed experience.

30. PROJECT DETAIL SYSTEM

Each project should contain:

* Project name
* Category
* Location
* Year
* Status
* Project size
* Scope
* Services provided
* Gallery
* Videos
* 3D experience where applicable
* Floor plans
* Project story
* Key features
* Enquiry CTA

The CMS must allow NASI to add new projects without requiring a developer every time.

31. ABOUT NASI

Do not create a boring corporate biography.

Headline:

BUILT AROUND A SIMPLE IDEA.

Supporting statement:

Create better spaces. Create better opportunities. Create lasting value.

Show:

REAL ESTATE

↓

CONSTRUCTION

↓

INTERIORS

↓

LONG-TERM VALUE

Include:

* Company philosophy
* Leadership
* Expertise
* Approach
* Values
* Vision
* Milestones

Use actual team and project photographs.

32. THE NASI DIFFERENCE

WHY NASI?

01 — INTEGRATED THINKING

Real estate, construction and interiors under one ecosystem.

02 — EXPERIENCE OVER TRANSACTIONS

The relationship goes beyond simply closing a deal.

03 — DETAIL-LED EXECUTION

Small decisions often define the final outcome.

04 — TRANSPARENCY

Clear communication, structured processes and realistic expectations.

05 — LONG-TERM VALUE

Every project should be considered beyond the immediate transaction.

33. NASI INSIGHTS

Do not use a generic “Blog” page.

Call it:

NASI INSIGHTS

Categories:

* Real Estate

* Construction
* Interiors
* Architecture
* Investment
* Bengaluru
* Land & Development
* Market Perspectives

Content types:

Market Reports

Property Guides

Investment Perspectives

Project Stories

Construction Knowledge

Interior Stories

Bengaluru Development Updates

This section should become an important SEO asset for NASI.

34. ASK NASI — FUTURE FEATURE

Future-facing feature:

ASK NASI

The experience should feel like a private property advisor.

Users could ask:

Show me residential properties under ■2 crore.

I want a plot near South Bengaluru.

Which properties are suitable for my requirements?

What would it cost to construct a 2,000 sq.ft house?

Can NASI handle the interiors?

The system should answer only from approved NASI information.

It must never invent:

* Property availability
* Prices
* Legal status
* Documentation
* Investment returns
* Property specifications

35. LEAD GENERATION

Do not aggressively ask for phone numbers immediately.

Avoid:

ENTER YOUR NAME

ENTER PHONE NUMBER

SUBMIT NOW

Instead use contextual CTAs.

PROPERTY

Interested in this property?

Let’s arrange a private viewing.

REQUEST A VIEWING

CONSTRUCTION

Planning to build?

Tell us what you’re building.

START A PROJECT

INTERIORS

Have a space in mind?

Let’s design it together.

DISCUSS YOUR SPACE

36. CONTACT PAGE

Headline:

LET’S BUILD SOMETHING WORTH TALKING ABOUT.

Four options:

I WANT TO BUY

Explore properties / schedule a viewing.

I WANT TO BUILD

Discuss construction requirements.

I WANT TO DESIGN

Discuss interiors.

I WANT TO PARTNER

Land / development / collaboration.

37. OFFICIAL NASI CONTACT INFORMATION

Use these details consistently throughout the website.

NASI GROUP

Office Address

Shop #5, Begur-Koppa Road, Vemana Circle, Mylasandra,

Begur Hobli, Bengaluru – 560068, Karnataka, India

PHONE

7676767229

7760596956

7760008769

EMAIL

nasi.group.official@gmail.com

All three phone numbers should be available wherever appropriate.

On mobile:

Tap to Call

On WhatsApp-enabled CTAs:

Chat on WhatsApp

38. FOOTER

39. CMS — PROPERTY MANAGEMENT

NASI must be able to independently manage properties.

Property fields:

Basic

* Property Name

* Location

* Property Type
* Status
* Price
* Price Unit
* Area
* Description

Property Details

* Bedrooms
* Bathrooms
* Plot Area
* Built-up Area
* Facing
* Parking
* Amenities
* Features

Media

* Main Image
* Gallery
* Videos
* Floor Plans
* 360° Tour
* Virtual Tour
* 3D Model

Location

* Address
* Latitude
* Longitude
* Map
* Nearby Places
* Connectivity

SEO

* SEO Title
* Meta Description
* URL Slug
* Featured Image
* Structured Data

The system should be scalable from 10 properties to hundreds of properties.

40. CMS — PROJECT MANAGEMENT

NASI should be able to create:

* Real Estate Projects

* Construction Projects
* Interior Projects

Each project can contain:

* Project information
* Gallery
* Videos
* Progress
* Timeline
* Services
* Location
* Description
* Features
* Case study
* SEO information

41. CMS — INSIGHTS

NASI should be able to independently publish:

* Articles
* Market reports
* Property guides
* Project stories
* Construction articles
* Interior articles

Fields:

* Title
* Category
* Author
* Date
* Featured image
* Content
* Related property
* Related project
* SEO metadata

42. SEO STRUCTURE

Recommended URLs:

/real-estate/

/real-estate/bengaluru/

/properties/

/properties/bengaluru/

/properties/bengaluru/property-name/

/construction/

/construction/project-name/

/interiors/

/interiors/project-name/

/projects/

/insights/

/about/

/contact/

Implement:

* Proper metadata
* Structured headings
* Schema markup
* Local Business schema

* Property-related schema where appropriate
* FAQ schema where appropriate
* Image alt text
* Internal linking
* XML sitemap
* Google Search Console
* Location-focused SEO pages

43. ANALYTICS

Track meaningful interactions.

PROPERTY

* Property viewed
* Property enquiry
* Property saved
* Viewing requested
* Floor plan opened
* 3D opened
* Virtual tour started
* Location map interacted with

CONTACT

* WhatsApp clicked
* Phone clicked
* Email clicked
* Contact form submitted

BUSINESS

* Construction enquiry
* Interior enquiry
* Partnership enquiry
* AI concierge interaction

The objective is to understand:

WHAT USERS SEE → WHAT THEY EXPLORE → WHAT THEY WANT → WHAT THEY CONTACT NASI ABOUT

44. VISUAL DESIGN SYSTEM

PRIMARY BACKGROUND

Deep charcoal / near-black

SECONDARY

Warm off-white

PRIMARY ACCENT

NASI Gold

SECONDARY ACCENT

Deep Maroon

Maroon should be used sparingly.

45. TYPOGRAPHY

DISPLAY HEADLINES

Canela / Cormorant Garamond or a similar sophisticated editorial serif.

HEADINGS

Marcellus / Optima-inspired typography.

BODY

Inter / Neue Haas Grotesk-style neutral sans-serif.

NUMBERS

Montserrat SemiBold.

Typography should be:

Large + Elegant + Spacious + Confident

Avoid filling the screen with paragraphs.

46. MOTION DESIGN

Motion is important, but it must have purpose.

Use:

* Scroll-triggered transitions
* Parallax
* Image reveals
* Mask animations
* Text transitions
* 3D movement
* Horizontal scrolling
* Image morphing
* Cursor interactions
* Magnetic buttons
* Subtle hover states
* Page transitions

Avoid:

* Constant particle effects
* Excessive bouncing
* Random floating objects
* Over-animated text
* Animation everywhere

Principle:

MOTION WITH PURPOSE.

47. HUMAN-DESIGNED REQUIREMENT

This is a mandatory requirement.

The website must not look AI-generated.

DO NOT USE:

- Generic AI buildings
- Fake people
- Generic luxury stock photographs
- Unrealistic architecture
- Artificial landscapes
- Excessive AI renders
- Generic corporate photographs
- Generic AI copy
- Repetitive card layouts
- Excessive gradients
- Random 3D objects

PRIORITISE:

- Real NASI projects
- Real construction sites
- Real interiors
- Real properties
- Real locations
- Real team
- Real materials
- Real project stories

The website should feel documented and authentic, not generated.

48. MOBILE EXPERIENCE

Mobile should not simply be a reduced desktop version.

It should be designed independently.

Priorities:

1. Fast loading
2. Easy property discovery
3. Large imagery
4. Swipe galleries
5. Sticky enquiry CTA
6. WhatsApp
7. Click-to-call
8. Lightweight 3D
9. Easy filtering
10. One-handed navigation

49. PERFORMANCE

Despite being visually advanced, the website must remain fast.

Implement:

* AVIF/WebP
* Responsive images
* Lazy loading
* Progressive image loading
* CDN
* Caching
* Code splitting
* Optimised fonts
* Deferred scripts
* Progressive 3D loading

Important:

Do not load the entire 3D experience before the visitor interacts with it.

50. TECHNOLOGY DIRECTION

The development team can explore:

FRONTEND

React / Next.js

3D

Three.js / React Three Fiber / WebGL

CMS

A scalable headless CMS or suitable WordPress-based architecture depending on development requirements.

DATABASE

Scalable structured database.

HOSTING

CDN + performance-optimised hosting.

The final technology choice should be based on:

Performance + SEO + CMS usability + scalability + maintainability.

Not technology for the sake of technology.

51. PRIORITY FEATURES

MUST HAVE — PHASE 1

01

Immersive homepage

02

Real Estate → Bengaluru Properties

03

Premium property listing

04

Individual property pages

05

Construction section

06

Interior section

07

Projects

08

About

09

Insights

10

Contact

11

CMS

12

SEO

13

Analytics

14

Mobile optimisation

SHOULD HAVE — PHASE 2

01

Interactive property maps

02

3D property experiences

03

Before/After interiors

04

Material Explorer

05

Project Pulse

06

Advanced property intelligence

07

Virtual tours

FUTURE — PHASE 3

ASK NASI

AI-powered property and construction concierge.

CLIENT PORTAL

Project progress, documents, updates and communication.

DIGITAL PROJECT MANAGEMENT

Construction progress integrated directly with NASI operations.

52. FINAL WEBSITE EXPERIENCE

When someone opens the website:

“This is not a normal real estate company.”

After exploring Real Estate:

“They actually understand property.”

After Construction:

“They know how to execute.”

After Interiors:

“They understand design.”

After Projects:

“They actually have capability behind the brand.”

After About:

“They’re building something bigger.”

And finally:

“I WANT TO SPEAK TO THEM.”

FINAL CREATIVE DIRECTION

The developer and designer should not interpret this as a request for a real estate template.

The actual requirement is:

Build NASI Group a premium digital ecosystem that communicates its expertise across Real Estate, Construction and Interiors through immersive storytelling, curated Bengaluru property discovery, spatial experiences, project documentation and human-centred design.

The website should combine:

Luxury Architecture Publication

Premium Property Advisory

Construction Portfolio

Interior Design Studio

Interactive Digital Showroom

into one coherent NASI experience.

The three pillars remain:

REAL ESTATE

PROPERTY, WITH PERSPECTIVE.

CONSTRUCTION

BUILT WITH INTENTION.

INTERIORS

SPACES THAT FEEL LIKE YOU.

And everything ultimately comes back to:

NASI GROUP

BUILDING LEGACY.
